General 7361, Application US/09252991A
Patent No. 6551795
GENERAL INFORMATION:
TITLE OF INVENTION: NUCLEIC ACID AND AMINO ACID SEQUENCES RELATING TO PSEUDOMONAS
TITLE OF INVENTION: AERCHOROSA FOR DIAGNOSTICS AND THERAPEUTICS
TITLE OF INVENTION NUMBER: US/09/252,991A
CURRENT FILING DATE: 1999-02-18
CURRENT FILING DATE: 1998-02-18
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/074,788
PRIOR APPLICATION NUMBER: US 60/094,190
PRIOR PILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-02-18
PRIOR PILING DATE: 1998-02-18

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

California Pristionchus pacificus genomic, genomic
             insertions in Mu inactive lines were extracted from the UniformMu maize population by the thermo assymmetric tinterlaced PCR (TAIL) protocol using primers specific for the Mu terminal inverted repeat and a set of 16 arbitrary primers. Amplicons were size enriched using Sepharose 400 spin columns and cloned into the TOPO PCR4 vector."

The German cDNA Consortium
Direct Submission

Nucleated (12-NOV-2004) MIPS, Ingolstaedter Landstr.1, D-85764
Neuherberg, GERMANY
Clone from S. Wiemann, Molecular Genome Analysis, German Cancer
Research Center (DKF2); Email s wiemann@dkfz-heidelberg.de;
sequenced by Agowa (Berlin/Germany) within the cDNA sequencing
consortium of the German Genome Project.
This clone (DKF20458N063) is available at the RZDD Deutsches
Ressourcenzentrum fuer Genomforschung GmbH in Berlin, Germany.
Please contact RZPD for ordering:

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           lleProGluGluLeuProLeuProLysGluSerArgTyrTrpLeuArgGluIleLeu 80
                                                                                                                                                                                                                                                                                                   Transgenic plants containing a bacterial gene which encodes an enzyme able to catalyse prodn. of an antiviral, bactericidal, fungicidal or insecticidal factor are new. A preferred gene is ubic from E.coli (AAQ92409) which codes for chorismate-pyruvate lyase (ARY4742). The lyase catalyses conversion of chorismate to p-hydroxybenzoic acid and transgenic tobacco plants which express the active enzyme are resistant

The present sequence is that of the coding region of the Escherichia coll strain W310 ubiC gene in expression construct pBT24a. The gene encodes chorismate pyravate lyses (CPL, see AAMS0968). It was obtained by PCR amplification of strain W310 genomic DNA using primers (see ABA91839-40) based on the published B. coll ubiC gene. The CPL open reading frame is used in an expression of seet along primers (see ABA91839-40) comprises the CPL coding sequence doring the high-level production of p-hydroxybenzoic acid (pHBA) in green plants. The eassette also has a sequence encoding sequence operably linked to a promoter capable of driving protein expression in higher plants. The cassette also has a sequence encoding a chloroplast transit peptide, its natural cleavage site, and a small portion of a transit peptide, its natural cleavage of the content to the chloroplast targeting sequence targets the foreign protein to the chloroplast targeting sequence targets the foreign protein to the chloroplast and aids in its uptake into the organelle. The cleavage site is unique to the transit peptide, and cleavage of the cleavage site is unique to the transit peptide, and cleavage of the chievest protein encoded by the cassette at this site releases a novel plant comprising the CPL enzyme activity, comprising the mature CPL conzyme and a small portion of transit peptide donor (see AAMS0961). A plant comprising the CPL expression cassette is claimed, and may be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Producing para-hydroxy benzoic acid in green plant, comprises expression of unique expression cassette containing gene encoding chorismate pyruvate lyase operably linked to specific chloroplast targeting
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 soybean, rapesed, sunflower, cotton, corn, tobacco, alfalfa, wheat, barley, oats, sorghum, rice, Arabidopsis, sugarbeet, sugarcane, canola, millet, bean, pea, rye, flax or a forage grass. PHBA is a monomeric component of liquid crystal polymers which have application in the automotive, electrical and other industries
